The U.Va. Engineering School is leading a charge to educate the engineers needed to support Virginia's growing high-technology sector. Through the Engineers PRODUCED in Virginia program, students are able to earn a four-year engineering degree while remaining in their communities.
Engineers PRODUCED in Virginia

Engineers PRODUCED in Virginia gives students the opportunity to earn a four-year engineering degree through a partnership of the Virginia Community College System and the U.Va. Engineering School. Students first earn a two-year engineering degree at their local community college, before continuing on, in their communities, to complete a U.Va. Bachelor of Science degree in Engineering Science.

The entire program is engaging and developing state-of-the-art information technology solutions to deliver courses from computer desktop to computer desktop. In this setting, faculty from the area community colleges and U.Va. can interact with students through a host of innovative live and asynchronous communication channels.

There are currently about 120 students enrolled in the Engineers PRODUCED in Virginia program, with the first class set to graduate in 2012.

PRODUCED leaders are now working with companies, community development groups and institutions of higher education to expand the program and ensure its long-term success.
